

Overview of the expansion of the RAH

New programme version for the Rayocomp PS10: 02.45
New programme version for the Rayocomp PS1000 polar: 96.04

The Rayonex Analysis- and harmonisation programme (RAH) experienced within the last few months comprehensive expansions , that can be summarised like this:

- ❶ Under the RAH- programme number 04 (Electrosmog) the programme number 04.28 LTE was added. Now, contamination to this new impuls modulated pollution can be evaluated.
- ❷ As the Rayoflora was expanded by one important probiotoc bacterial strain, you can also find this now in the RAH under the number 07.72 *Bifidobacterium bifidum*. Thus, you can now find again under the programme number 07.60 Probiotic bacteria, total, all bacteria strains of the Rayoflora – ideal also for the tests with the Rayoflora ampoule (see item number 3452)
- ❸ The RAH submenu point 08.85 Environmental toxins complete was included recently. It contains the following new submenu programmes:

08.86 Benzene
08.87 Benzpyrene
08.88 DDT
08.89 Formaldehyde
08.90 Lindane
08.91 Pentachlorophenol (PCP)
08.92 Phtalates
08.93 Polychlorinated biphenols
08.94 Tobacco toxins / tobacco smoke

- ④ The programme point 09 Enzymes was included completely new and was arranged directly according to groups of organ. Thus, it is now possible to do also tests and harmonisations in this important area. The enzymes will be included in the test and harmonisation protocols with the next update.

- ⑤ In the field of bacteria, virus, parasites, and fungus, there are the following expansions:

Bacteria:

- 20.27 Moraxella
- 20.28 Scarlatinum (scarlet fever)
- 20.83 Bartonella henselae
- 20.84 Fusobacterium necrophorum V
- 20.85 Spirillum serpens
- 20.86 Sphaerotilus natans

Virus:

- 22.20 Varicella (chickenpox)
- 22.85 Hepatitis D virus V
- 22.86 Hepatitis E virus V
- 22.87 Dengue virus
- 22.88 Rubella (German measles)
- 22.89 Coxsackie virus A-7
- 23.14 Measles virus (the frequency range was added)
- 23.15 Mumps virus (the frequency range was added)
- 23.18 VSI virus (VSV)
- 23.19 HRSV
- 23.34 A/H5N1
- 24.34 Macracanthorhynchus hirudinaceus

Parasites:

- 24.35 Anisakis simplex
- 24.55 Fasciola hepatica (the development stages of the parasites were added)
- 24.63 Schistosoma haematika (the development stages of the parasites were added)
- 24.64 Schistosoma mansoni (the development stages of the parasites were added)
- 24.86 Moniezia expansa
- 24.87 Taenia serialis
- 24.88 Diphyllbothrium latum
- 24.89 Hymenolepis diminuta
- 25.48 Coccidia (feline) V
- 25.49 Coccidia (bovine) V
- 25.50 Cryptosporidia V
- 25.51 Isospora belli
- 25.69 Pediculidae
- 25.70 Pthirus pubis

Fungus:

- 27.60 Histoplasma

You can find the descriptions of the new germs in the new RAH Special edition of the "Vereinigung zur Förderung der Schwingungsmedizin"

- ⑥ In the field of Hormones there are the new following RAH- programmes:

- 64.31 TSH
- 64.32 FT3
- 64.33 FT4
- 64.34 Calcitonine
- 64.36 Parathormone
- 64.61 Renin
- 64.62 Angiotensin I
- 64.63 Angiotensin II
- 64.64 Aldosterone

Internet: www.rayonex.de • E-mail: info@rayonex.de

- ⑦ In the programme point 31, the RAH programme: 31.68 Detoxification by chlorophyll a and b was included.
- ⑧ With the new software versions for the Rayocomp PS10 and the Rayocomp PS1000 Polar, the new, so-called C-module, can now be activated. This module was developed within the last 2 years and contains 87 programmes, which deal in particular with cell degeneration. A detailed information will be given to all circles of experts using a PS10 or a PS1000 polar.
- ⑨ With the new RAH version the following 5 new test protocols of the RAH in the Rayocomp PS1000 polar as well as in the M10 module of a Rayocomp PS10 are now available:

33.24 Iron-deficiency anaemia
43.13 Bronchitis, acute
43.14 Bronchitis, chronic
63.10 Psoriasis
65.34 Thyroid gland hypofunction

Thus, there are now 32 different test protocols available. The new included test protocols have also been described in detail in the new RAH Special edition.

- ⑩ The new RAH version contains 5 new 70. programmes:

70.53 Disease breast tissue / mammary glands
70.54 Thyroid gland / parathyroid gland
70.55 Dengue fever
70.56 Immunomodulation
70.57 Changes of cell structures

❶❶ The RAH programme 53.30 Amyotrophic lateral sclerosis / muscle atrophy ALS was integrated up to now under Musculoskeletal system Pathology. As it is a neurologic illness, it is additionally integrated in this version under 55.46 muscle atrophy ALS. Out of respect for users (especially international users) that don't have the new RAH-special edition available, the old programme number 53.30 will only be deleted with the next RAH-version. We ask for your understanding.

❶❷ New functions:

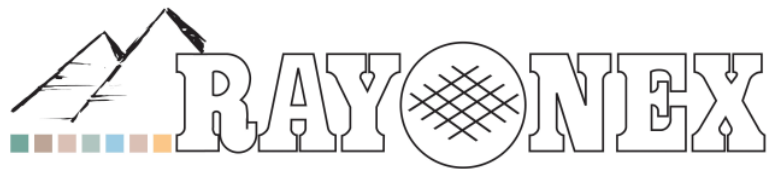

In the RAH of the Rayocomp PS1000 polar, there are two new, very helpful functions:

1. The RAH programmes found and marked in the analysis can now be transferred directly to the harmonisation with the use of the button harmonising. There is no need to buffer it on the Green-card any more.
2. Within the RAH harmonisation, particular RAH programmes can now be deleted and be replaced at any position again.

By the way: the new RAH-special edition now contains substantial descriptions for the RAH programmes of Dr. med. Hamada from Japan. In total, the RAH contains now 1766 different programmes (before 1513).
